

SUPPLEMENTARY FIGURE. Trends in estimated proportions of SARS-CoV-2 reverse transcription–polymerase chain reaction test results with S-gene target presence and variant proportions and nowcast projections from genomic surveillance classified by S-gene target presence or S-gene target failure* — United States, September 27, 2023–January 20, 2024

Abbreviations: S-gene = spike gene; SGTF = S-gene target failure; SGTP = S-gene target presence; ICATT = Increasing Community Access to Testing program

* Nowcast estimates are model-based projections of variant proportions for the most recent two-week periods to enable timely public health action. CDC uses the Nowcast to forecast variant proportions before the weighted estimates are available for a given two-week period.
